FREDDY HANY LABIB

Frontend React Developer

Computer Science Graduate • React Developer • Web Application Builder

A professional portfolio presenting my background, technical skills, training, featured projects, development approach, and career direction.

CAREER TARGET

Frontend React Developer • Junior Frontend Developer • React Internship • Freelance Projects

TECHNICAL FOUNDATION

HTML5 • CSS3 • JavaScript • React • REST APIs • Git/GitHub • Responsive Design

Professional Profile

Computer Science graduate (CGPA 3.69/4.0, Future University in Egypt, graduating July 2026) focused on Frontend Development with React and modern JavaScript. I work with component-based architecture to build reusable UI elements, connect applications to APIs, and create responsive, production-style layouts. My academic background in Computer Science adds a solid foundation in data structures, algorithms, and how software systems work underneath the interface.

Core Strengths

- **Problem Solving** — breaking issues into smaller parts, isolating the cause, testing and iterating on fixes.
- **React Architecture** — structuring reusable components, hooks-based state, and client-side routing.
- **Attention to UI** — spacing, layout, responsiveness, and consistency across breakpoints.
- **Full-Stack Awareness** — understanding how frontend features connect to backend services and data.
- **Adaptability** — comfortable picking up new tools, libraries, and project requirements quickly.

Technical Skills

HTML5 / CSS3: Semantic markup, Flexbox, responsive layouts, typography, accessibility-aware structure.

JavaScript (ES6+): DOM interaction, async operations, arrays/objects, core language fundamentals.

React.js: Component architecture, Hooks, props/state, conditional rendering, React Router.

REST APIs: Connecting frontend applications to backend services and handling dynamic data.

Bootstrap / Vite: Rapid responsive UI development and modern React project tooling.

Git & GitHub: Version control, collaboration workflows, portfolio-ready repo history.

ASP.NET Core / .NET 8: Practical backend exposure and API integration with frontend apps.

PostgreSQL / EF Core: Relational database integration in full-stack projects.

Computer Science Foundation

Data Structures and Algorithms, Operating Systems, Computer Networks, Computer Architecture, Natural Language Processing, and core software development principles.

Training & Professional Development

Digital Egypt Pioneers Initiative (DEPI) — Round 5, Frontend React Track

- React Fundamentals & component-driven development
- React Hooks & state/lifecycle patterns
- React Router for multi-view SPA navigation
- API integration with backend/external services
- State management & component architecture
- Responsive development across screen sizes

Featured Graduation Project — PetLife Egypt

A comprehensive pet-care platform built as a graduation project, designed around multiple user roles (pet owners, veterinarians, shop owners, administrators) rather than a single static flow. Includes pet profiles, pet matching, veterinary services, in-app communication, a supplies marketplace, and an admin dashboard. **Repo:** github.com/freddyhani/petlife-egypt *(replace with the actual repo/live demo link)*

Technology Stack

- **Frontend:** React (Vite) for UI and interactive application flows
- **Backend:** ASP.NET Core / .NET 8 API services
- **Database:** PostgreSQL with Npgsql and Entity Framework Core
- **AI Service:** Flask REST API for pet-health note classification

AI Component — PetCare Egypt

Classifies pet-health notes into five categories (Digestive, Ear, Mobility, Parasites, Skin) using a 2,000-note dataset, 80/20 train/test split. Active model: TF-IDF + Logistic Regression (~80.25% accuracy, ~80.21% F1). A DistilBERT experiment scored slightly higher (~80.75% accuracy, ~80.79% F1) but wasn't deployed due to transformer config constraints.

What This Project Demonstrates

- Full-stack thinking — React frontend communicating with backend APIs end to end
- Multi-role system design across four distinct user types
- Integration across frontend, backend, database, and an AI microservice
- Real-world debugging across APIs, ports, DB connectivity, and configuration

What I Can Contribute

- **Frontend Development** — responsive, interactive UIs with HTML, CSS, JavaScript, React, Bootstrap
- **React Applications** — reusable components, routing, and state management
- **API Integration** — connecting interfaces to REST APIs and backend data
- **Dashboards** — organized admin/business interfaces with clear information architecture
- **Landing Pages & E-Commerce UI** — product listings, filters, responsive layouts

Career Vision

Looking to move from project-based learning into professional software development — gaining hands-on experience as a Frontend React Developer, working with real teams on production-quality applications, and growing toward ownership of complex interfaces and wider application architecture.

Open to Frontend React internships, junior developer roles, freelance projects, and collaborations.
